

Lab 4 AI Chat History

SRN: PES2UG24CS430

Assignment: Tug of War Repair Lab

This export contains the visible user and assistant messages from the Codex conversation up to the export point. Tool logs are omitted.

User

ok so i have a new assignment - i need you to get deliverables mentioned done - all the details are available in the zip file - my srn is pes2ug24cs430 do let me know if you have got access to the account
https://github.com/gsathvik73-afk

Assistant

I'll inspect the ZIP and its assignment instructions, then check the GitHub account access. I'll use your SRN where the deliverables require it.

Assistant

I found earlier SmartExpense files in the workspace, but no ZIP attachment yet. The GitHub command line has a saved login for `gsathvik73-afk`, but its token is invalid, so I can't confirm write access. I'm checking whether the existing files contain this assignment while you attach the ZIP.

Assistant

Please attach the assignment ZIP here. I can see earlier SmartExpense files, but no ZIP in the workspace or this message. Is this the same assignment or a new one?

- Same SmartExpense assignment
- A different assignment

User

Attached assignment ZIP: drive-download-20260930T035017Z-1-001.zip

User

I have added the ZIP.

Assistant

I have the ZIP path now. I'll inventory its contents and read the assignment brief first, then build the required files in the workspace. I also confirmed the GitHub profile is public, but the browser is signed out and the saved command-line token is invalid, so account write access is not currently available.

Assistant

This is a separate Vibe Coding lab package. I'm using the PDF and spreadsheet workflows to read the handout and class repository lists, then I'll identify the deliverables tied to `PES2UG24CS430`.

Assistant

Your SRN maps to [SETAPESU26/56_tug_of_war](https://github.com/SETAPESU26/56_tug_of_war). The lab requires a before video, code fixes and README features, an after video, and an exported chat history under `Lab-4`. I'm reading that repository's README and code now.

Assistant

I've inspected the original game. Its input lock drops rapid overlapping A/D presses, and the three requested features are absent. I'm recording the required 10-second baseline from the unmodified code before editing it.

Assistant

The baseline clip is saved from the untouched game. I'm now changing the input handling, adding the computer surge and visual reactions, and wiring the 45-second sudden death timer. After that I'll run focused gameplay checks and capture the updated game.

User

do you have access to git ?

Assistant

Yes, I can read and clone the assigned public GitHub repository. I've cloned it locally and am working on it. I don't currently have authenticated write access to your GitHub account: the browser is signed out, and the saved GitHub token is invalid. I can finish the local deliverables, but pushing them will need you to sign in.

Assistant

The updated game passes the focused checks for overlapping keys, key repeat handling, the computer surge, sudden death, reset, and rendering. I've also verified frames from the new 10-second clip: the surge and sudden death labels appear during gameplay. I'm packaging the submission files and the AI interaction record next.

Assistant

The code and both videos are ready locally. I'm exporting the visible conversation into the lab folder and checking whether Codex can provide a shareable full-chat link. The GitHub upload still depends on account sign-in.
